Tatura Milk Industries was incorporated in 1907 and is an innovative dairy processing company involved in the development of value added products. This includes the manufacture of infant formula products since the early 1990s. Our strategy is to manufacture product formulated jointly with customers and manufactured under the customer's brand.

In addition to Ausnutria, Tatura also manufactures infant formula products for customers under their brand in several countries including China and South Korea.

It is our understanding that Ausnutria is currently importing infant formula exclusively from Tatura that is originated and manufactured solely in Australia. We currently manufacture bulk product and Allnutria canned product for Ausnutria. Formulations of all products manufactured for Ausnutria are developed jointly by Ausnutria and Tatura.

Should you or your customers require any further clarification do not hesitate in contacting me directly.
